

**TAKE GOOD CARE
OF YOUR EMPLOYEES:**

CHOOSE THE DAMCON TREE WRAPPER®

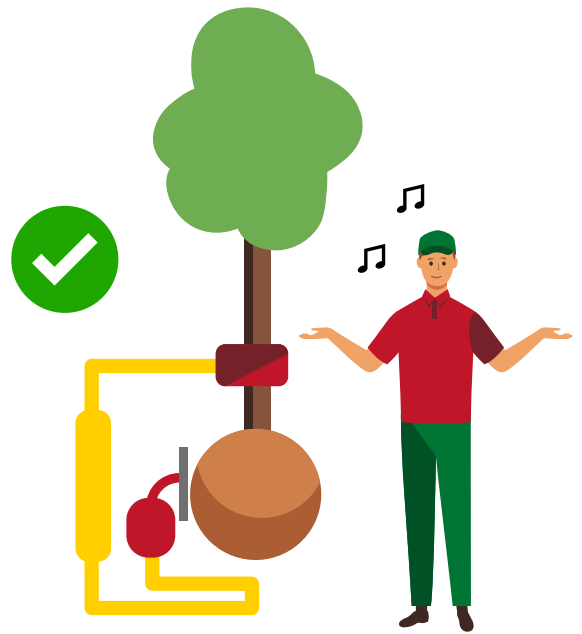

**Discover the Damcon
Tree Wrapper®: the innovation
for efficient rootball wrapping**

We proudly present our latest innovation:
the Damcon Tree Wrapper®. This machine
is specially designed to significantly lighten
the heavy work of wrapping rootballs.

With the Damcon Tree Wrapper® you not
only save time, but also labor, which results
in less physical strain for your employees.
And it is fun and varied work too!

**ADVANTAGES
OF THE DAMCON
TREE WRAPPER®**

- ✓ **LESS PERSONNEL NEEDED**
- ✓ **THE RIGHT WORKING POSTURE**
- ✓ **GREAT USER CONVENIENCE**

How does it work?

After the rootball has been made in the field with a rootballing machine, the Damcon Tree Wrapper® comes into action. The machine lifts the rootball slightly, after which the wrapping process begins. The net is easily secured at the beginning of the wrapping, the machine wraps the rootball completely and at the end the net is easily secured and cut again. Ready for the next rootball!

Suitable for compact machines

The Damcon Tree Wrapper® is specially designed to be mounted on compact machines, such as a remote-controlled tool carrier, a Skidsteer on caterpillar tracks or a wheel loader.

Sustainable rootball net

The net used to wrap the rootballs is completely biodegradable. This means that the rootball, including the net, can be planted immediately.

The advantages at a glance:

- No more heavy physical effort
- Less personnel needed to wrap rootballs
- Easy to use: multiple rootball sizes with just one machine

Make your work more pleasant, efficient and sustainable with the Damcon Tree Wrapper®!
